DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. This change appears to be an obvious typographical error. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 25, line 8, delete "fro" and replace with the word "from".

Allowable Subject Matter

Claims 1-25 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 23 is allowable for the reasons set forth in the previous Office action.

The arguments supplied by the applicant in response to the last Office action are persuasive. The prior art, including Smick et al., fail to teach or suggest the device and method of claims 1, 11, 14, 15, 21, and 25 to further include the limitation detecting a variation in the intensity of an adjusted intensity beam profile where the step of detection is independent from the step of forming the adjusted beam intensity profile. Smick et al. detects a beam profile by inserting a Faraday cup into a beam and measuring the beam profile. This alters the beam intensity profile. Therefore, in Smick et al., the step of detecting and the step of creating the adjusted beam profile are the

Art Unit: 2881

same step. Claims 2-10, 12-13, 16-20, 22, and 24 are allowable by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The examiner has provided on the form PTO-892 US Patent documents considered pertinent to the forming and measuring of a charged particle beam particularly where a profile of the beam is measured.
